

SWEN424 (2017) - Model-Driven Development

Prescription

An introduction to model-driven development - the modern approach to large scale software system development along with an introduction to the core concepts of model-driven development, the course will address the foundations and principles for supporting infrastructures. This includes an in-depth discussion of 'metamodelling' and a critique of existing modelling techniques. Students will get hands-on experience with using a meta-case tool.

Course learning objectives

Students who pass this course should be able to:

1. Have an understanding of model-driven development
2. Understand the advantages and disadvantages of domain-specific modelling approaches.
3. Understand the potential and implementation challenges arising from description hierarchies (meta-level hierarchies).
4. Differentiate between super and meta classes
5. To use metamodelling as a language definition tool and as a tool for modeling domains.
6. Use the metamodeling principles discussed in a number of contexts (e.g. XML, UML Definition, Semantic Web).

Course content

Model-driven development is a vital ingredient of modern software engineering. Along with an introduction to the concepts of model-driven development and domain-specific modelling, SWEN 424 addresses the foundations and principles for supporting infrastructures. This includes an in-depth discussion of 'metamodelling' and a critique of existing modelling techniques. Students will get hands-on experience with using a meta-case tool.
